

Christopher Hacia

Lead / Senior Web & Software Developer / Engineer

Just because I have leadership skills and years of overall experience... It does not mean I am no longer capable of adapting and growing further. It instead nurtures my ability to do so.

Christopher Hacia

Experience

Contingent Worker via Apex **Walmart** / Software Engineer III
August 2022 – November 2022, Mountain View, CA. (Contract)

Working on the 3rd party sales platforms. Working with ReactJS, React Native, Redux, GraphQL, Node.js

Contingent Worker via Pyramid Consulting **Facebook** / Software Engineer III
October 2021 – April 2022, Menlo Park, CA. (Contract)

Working in the internal tier I am developing tooling for Ownership and management for files, process, and more. Utilizing React.js, GraphQL via Relay.js, Flow.js and PHP

Cognizant / Software Engineer
April 2021 – May 2022, Remote. (Contract)

While working at Cognizant I worked for multiple companies such as **FMGlobal** and **Wells Fargo** Bank. I have covered the roles of Lead Solution Architect, and Software engineer. Utilizing ReactJS, jQuery, and various other frameworks and tools.

Intuit / Software Engineer II

April 2020 – April 2021, Mountain View, CA. (Contract)

At Intuit I worked with the Quickbooks ProAdvisor Accountant team in my time with Intuit I have run the gamut of engineering from building out new features and components with ReactJS and GraphQL to refactoring old code into ReactJS components. As well as supporting the product by finding and fixing bugs and security issues there in. Utilizing Jest to create unit tests and ESLint to ensure uniform and quality code therein.

Walmart Labs / Senior Software Engineer & Developer

September 2019 - April 2020, Sunnyvale, CA. (Contract)

Working with the Account-Post Transaction Team on *walmart.com*, I work with Hapi.js, Node.js, ReactJS, Redux, and GraphQL primarily. To build, maintain, and enhance the existing user experience of a user's account, and transaction history needs. I also build out end to end automation using Nightwatch.js (a node-based selenium web driver framework). So that we can maintain regression testing in our CI/CD Pipeline. Which primarily consists of Git and Jenkins. I mainly work on the Front End and Proxy layer.

Cisco / Senior Software Engineer & Developer

June 2019 - September 2019, San Jose, CA. (Contract)

Working with the DNAC team, I developed an automated end to end testing suite for internal use, using CodeceptJS. Built out and enhanced the functionality of client-facing tooling. Using NodeJS, ExpressJS, MongoDB, jQuery, ReactJS, and Redux to develop new features and enhance existing ones on the customer-facing platform for DNAC. As well as redeveloped the middleware of the end to end communications from server to client with Axios.js. All on top of using CSDL (Cisco Secure Development Lifecycle) to ensure the best quality code.

Guardian Alliance Technologies / Lead & Senior Software Engineer Full Stack Developer

September 2017 - April 2019, Stockton, CA.

Built from the ground up utilizing Codnigiter & Symfony PHP MVC Frameworks a software as a service application designed to help investigators conduct background investigations on applicants in the

public safety sector. The deployed services are FedRamp compliant and CJIS Certified. While here I have managed 2 sets of development teams in parallel one local and one offshore along with a QA team. In my time here I also help run Support. I also managed the services architecture from the server level up. Exposure to AWS EC2, S3, and Glacier. EC2 I spun-up and managed small clusters of servers for the development, staging and production environments.

MindSlap / Lead & Senior Software Engineer Full Stack Developer

August 2016 – September 2017, Stockton, CA

Across several platforms I have built, enhanced, or maintained older projects, from various companies and clients. Using Codigniter, Zend Framework, Wordpress CMS, and various other frameworks I developed and managed several projects and teams.

Zetta, Inc. / Senior Software Engineer Full Stack

April 2012 - July 2016, Sunnyvale, CA

Focusing on the front end of the tech stack I helped rebrand, develop, and enhance the features of a cloud based service that served in the Backup and Disaster Recovery sector. Primary Stack consisted of Zend Framework and ReactJS

fanmeetr / Lead Architect & Engineer (Sep 2011 - Dec 2012)

ZettaSet / Senior Software Engineer / Full Stack (Aug 2011 -Feb 2012)

UpMo / Senior Software Engineer / Full Stack (Apr 2011 – Jun 2011)

Campus Rhythm / Lead Architect & Engineer (Apr 2008 - May 2009)

RDP Group / Senior Full Stack Developer (Oct 2008 - June 2015)

Advocacy Unlimited / Lead Architect & Engineer (Apr 2008 - May 2009)
